# AIRWEAR® — BETTER THAN STANDARD PLASTIC

## The technologically **ADVANCED** material for all of your needs

*Airwear polycarbonate lenses are half the weight of standard plastic and are virtually unbreakable, making them an ideal lens for every lifestyle.*

## **Airwear lenses protect eyes**

The **World Health Organization** estimates that about 12 to 15 million people become blind from cataracts annually, of which up to 20% may be caused or enhanced by sun exposure. Unlike standard plastic, Airwear lenses provide 100% UV protection from harmful UVA and UVB rays.

According to the **American Academy of Ophthalmology**, more than 100,000 people sustain eye injuries each year and more than half of those injured are children.

Airwear lenses protect children and active individuals from eye injuries. They are 12x stronger than standard plastic lenses—so tough that NASA even uses the same material to construct visors for astronauts.

## **Airwear lenses provide versatility**

It's all possible with Airwear lenses. For every patient need, prescription, design and lens treatment, Airwear lenses have a solution.

What's more, your patients will feel a noticeable difference with Airwear lenses. They are 30% lighter and up to 25% thinner than standard plastic lenses and patients look good too!

***So do what's right for your patients.  
Recommend Airwear lenses.***
