

# DEFINITY® READING CHART

# A 100% DUALOPTIX™ DIGITAL FAMILY OF PRODUCTS

Hold this chart at a comfortable reading distance  
(about 16 inches from your face).

20/40	Presbyopia is an age-related condition that occurs when the eye's ability to change focus from far to near objects is compromised. <b>(Typical computer-sized type)</b>	<b>N12.5 .125</b>
20/30	To help correct your vision from presbyopia, we have developed a unique progressive lens called DEFINITY. <b>(Typical menu-sized type)</b>	<b>N10 .32</b>
20/25	DEFINITY lenses use a patented revolutionary design that uses both sides of the lens to correct your vision. <b>(Typical dictionary-sized type)</b>	<b>N8 .40</b>
20/20	This design allows DEFINITY lenses to deliver the widest field of vision with the least amount of distortion at the outer edges. <b>(Typical phone-book-sized type)</b>	<b>N6.3 .50</b>

## The right product for your customers

	DEFINITY® STANDARD	DEFINITY <sup>3</sup> CUSTOMIZED	DEFINITY <sup>3</sup> PLUS PERSONALIZED
Computer automatically selects between Regular and Short design		✓	✓

The GROUND VIEW ADVANTAGE™: An additional zone of vision at the bottom and sides of your lenses, unique to DEFINITY, allows you to see better when looking down at the ground. Many people who try progressive lenses complain that they have trouble seeing stairs, curbs, and just about anything at their feet. With DEFINITY lenses, you will see all that and more. DEFINITY lenses make life's activities easier. Everyday activities: stairs, curbs, computer use, and driving. Demanding activities: golfing, biking, hiking, and tennis. Presbyopia and progressive lenses: progressive lenses are for people with presbyopia. Presbyopia affects just about everyone

2

sooner or later, but most often occurs in your forties. It is when your near vision begins to blur. You will notice that you start pushing menus farther away to be able to read them. Years ago, people only had two options—purchase bifocals or reading glasses. Then came progressive lenses which allow you to see all distances without the unsightly lines that come with bifocals. Now there is DEFINITY: The least amount of distortion of any progressive lens. DEFINITY lenses lets you keep the same active lifestyle you had before and provides an additional zone that allows you to see the ground during everyday and more demanding activities. Ask for DEFINITY progressive lenses today.

FOCUS  
HERE

1

Live life on your terms with DEFINITY lenses. Whether you golf, hike, play tennis, or just enjoy taking a stroll during your lunch break, DEFINITY lenses is the ideal progressive lens for you. DEFINITY uses patented DUAL ADD Technology to create a progressive lens with the least amount of distortion, which lets you see through more of the lens. DEFINITY is a progressive lens whose far, near, intermediate, and unique ground view zone more closely mimics your natural vision. DEFINITY lenses works for those with an active life—those less inhibited by the visual limitations of other progressive lenses. The DEFINITY difference: DEFINITY lenses use both sides of the lens to

2

3

create a progressive lens that is as close to a regular, single-vision lens as you can get. This means that you will have less distortion throughout your lenses. DEFINITY gives you a wider intermediate zone, making them perfect for computer use, looking at your dashboard while driving, or seeing things between 18 inches to 6 feet away. DEFINITY allows your eyes to move naturally, as opposed to other progressive lenses, which cause people to move their head to see side to side, or what is at their feet. Smoother transitions: With DEFINITY lenses you will be able to transition between zones more naturally. It makes wearing DEFINITY lenses easy and comfortable from the moment you put them on.
