

HOYA

AMPLITUDE

A DISTINCTIVE WAVE
IN LENS DESIGN

Amplitude® lenses enable your eyes to make smooth, gradual movements when you change your focus from near to intermediate to far vision. Unlike bifocal lenses, Amplitude lenses eliminate the line that creates an abrupt, annoying vision change from near to far vision.

See why Amplitude
lenses are worth asking about.

LENS FEATURES

Get the most from your eye wear by choosing the best options for clarity, comfort and healthy sight.

- Factory hard coat that resists scratches
- Material that offers UV protection
- Non-glare treatments that help keep your lenses clean and eliminates reflections and glare so you can see clearly
- Sun-sensitive lenses that automatically adjust from clear indoors to sunglass-dark outdoors for comfortable vision in every light condition

Amplitude progressive lenses come in several great options for any frame style and a variety of colors and lens materials.

For standard frame sizes

- Amplitude, Amplitude iQ, Amplitude BKS, Amplitude HiDef

For small frame sizes

- Amplitude Mini, Amplitude Mini iQ, Amplitude Mini BKS, Amplitude Mini HiDef

Trust the advice of your eye care professional.
