

INCREASED COMFORT AND PROTECTION

Protect your eyesight and your eyewear with a quality Anti-Reflective option for extra benefits:

- › Increased scratch protection for your lenses
- › No distracting reflections on the surface of your eyewear
- › Sharper vision in dim light situations
- › Reduced glare from oncoming traffic during night-driving

Ask your eyecare professional about Anti-Reflection options available for your eyewear.

Note: Photochromic technology requires exposure to direct UV light to activate. Windshields and windows filter UV rays and will affect the darkness of photochromic lenses. Extreme temperatures also affect the performance of photochromic lenses.

CLEAR INDOORS

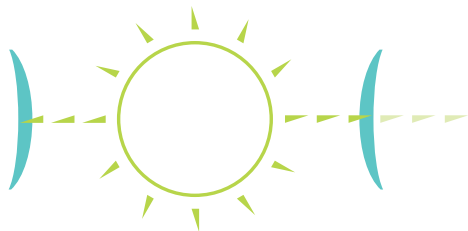

A GREAT EVERYDAY CHOICE

When daily activities keep you in constant motion in and out of buildings, it's nice to know that your PhotoViews photochromic lenses will adapt their darkness level for comfortable viewing.

Plus, PhotoViews provides your eyes 100% protection against UVA and UVB rays for healthy vision.

100%
PROTECTION

AN OPTION FOR EVERYONE

PhotoViews are available in single vision, bifocal and progressive lens styles for any age and any activity. Cool gray and warm brown options coordinate well with your frame choice for an appealing look.

ADVANCED PHOTOCROMIC TECHNOLOGY

While sun-sensitive lenses have been around for a while, PhotoViews include the latest advances in photochromic technology:

- > long-lasting molecular action
- > great UV protection
- > fast fade back to clear indoors

Protect your eyes by upgrading to PhotoViews today and enjoy the visual comfort that photochromic technology has to offer.

Ask your eyecare professional for a demonstration.
