

# SeaVision FAQ's

## Masks

**2000** - The SeaVision Classic Mask offers elegant simplicity without sacrificing function and comfort. A unique, very low volume design. (for small faces)

**2100** - For a comfortable fit with low volume and enhanced down and side vision. (for medium faces)

**2200 Ultra** – Comfortable fit for a full range of face sizes and facial features. It will fit standard to wide faces comfortably and will accommodate facial hair, large noses and high brows. (for large faces)

## Lens Styles

**Single Vision** – Single vision distance only

**Gauge Reader** – Distance vision with a fixed +2.00 add for near vision

**Bi-focal** – Large round seg with prescribed add

## Lens filters

**Clear** - Clear lens with no tint

**MaxVision** - Yellow lens used for low light situation such as stained lakes, quarries, caves, rivers, and night dives. Optimizes the available light to improve vision.

**Color Correcting** – Magenta tinted lens for use in clear waters enabling diver to see more rich and vibrant colors. This unique tint filter out the blue wavelengths of light in the water, allowing diver to see the brilliant red, orange, yellow and greens colors that are lost as diver descends.
