

2024 PRODUCT CATALOG

"Much to my surprise, I think I can see better with the dive mask than I can with my regular glasses. Outstanding quality and great customer service - Highly recommend."
-Hugh from CA, USA

ABOUT US

OUR HISTORY

SeaVision was founded in 1992 and has been manufacturing innovative and market-leading prescription dive masks and swim goggle lenses for divers and swimmers all over the globe.

Our state-of-the-art lens manufacturing laboratory is located in St. Petersburg, Florida. It has been producing the highest quality prescription eyeglass lenses for optical shops all across America since 1968.

SeaVision and our eyeglass lab are a family-owned and operated business where customer care is "job #1." You get the quality prescription dive mask that you want and outstanding customer service from the moment your order is placed.

OUR MISSION

Our mission is simple - We want to help as many people experience the underwater world as possible.

There is nothing quite as beautiful or peaceful as experiencing the outdoor wonder of our planet, especially the magnificent expanse of underwater ecosystems.

Our goal is to help others 'Sea Life Clearly' with the use of our prescription dive masks and swim goggles - whether it be scuba diving the Great Barrier Reef, snorkeling the Florida Keys, or even swimming in the pool with family.

OUR STORY

In 1994, when one of our employees and his son were diving off the coast of Florida, he noticed the brilliant colors that his camera had captured. Research showed how light and filters affected the human eye and he developed a way to use yellow and magenta lenses in his mask that brought a whole new underwater experience into view.

Fortunately, he worked for one of the largest optical labs in America and was able to put his ideas into production.

OUR LENSES

SINGLE VISION

SeaVision's custom single vision lenses correct nearsightedness (myopia) or farsightedness (hyperopia), either of which may include astigmatism.

These lenses have the same focal power throughout the entire lens - From top to bottom, and is not a drop-in lens.

Available filters: Clear, Color Correcting, or MaxVision

BIFOCAL

SeaVision's custom bifocal lenses are designed for people having difficulties seeing their dive computer and seeing in the distance.

If your prescription has an add power or you normally wear bifocals/progressives, then these lenses are the perfect choice for your diving experience.

The bifocal is placed near the nasal portion of the mask, providing optimal viewing of close objects when diving.

Available filters: Clear, Color Correcting, or MaxVision

GAUGE READER

SeaVision's Gauge Reader lens option is a non-prescriptive bifocal lens with a +2.00 power designed for the diver who has difficulty seeing up close objects such as your watch or dive computer.

Available filters: Clear, Color Correcting, or MaxVision

COLOR CORRECTING

SeaVision's Color Correcting (magenta) lenses were designed and created to be used in waters where there are more rich and vibrant colors to see. This unique and patented product is designed to filter out blue wavelengths in the water which allows you to see the brilliant reds, oranges, yellows, and green colors that are normally lost as a diver descends.

MAXVISION

SeaVision's MaxVision (yellow) lenses were designed as an alternative to our Color Correcting lenses. The MaxVision lenses are to be used in low-light situations such as lakes, quarries, caves, rivers, and night dives. These lenses help to optimize available light and help sharpen vision at the same time.

THE LEGACY

The SeaVision Legacy mask offers elegant simplicity without sacrificing function and comfort. A unique, low-volume design with multiple color combinations and lens options.
